# INFOLOGIC in a few words

INFOLOGIC Integrated Management Software editor and integrator, is a leader in the food supply industry and trade. The experience in the industrial environment, the technological know-how, the expertise on the food supply chain sector and its constraints, all acquired for 30 years now, make an exceptional partner out of the company in order to develop and make your industrial or trade activity more dynamic.

L'ERP COPILOTE is a last generation ERP. About 500 sites pilot their activity nowadays with the solution. The use of the Java technology, the web applications, the complete functional coverage of the solution, the interface with all types of computer-integrated material handlings and automatic machines, the tactile and voice function integration, the use of the system on Smartphone or tablet...turn COPILOTE into an efficient tool dedicated to the food supply chain.

## 1 A dynamic SME in expansion...

- Company's foundation in 1982
- 140 partners, 70% of the workforce are engineers
- 12,1 M€ Turnover in 2015
- 500 sites equipped with COPILOTE
- More than 18 000 stations installed
- A national coverages with the sites from Valence (26), Carquefou (44) and Toulouse (31)
- A settlement in Romania in Bucharest and in Iasi.

## 2 ... having won the trust of its customers.

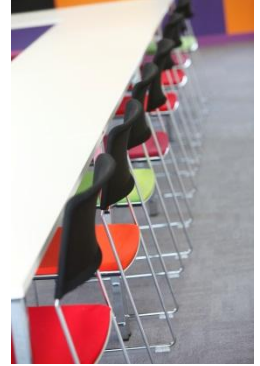

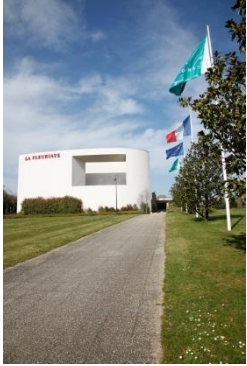

A few customer references :

- LDC (3,1 Mds € turnover)
- MIX BUFFET (140 M€ turnover)
- COUP DE PATES (63 M€ turnover)
- ROLAND MONTERRAT (60 M€ turnover)
- ...

### 3 A strong settlement in Brittany - Loire department.

- Foundation of the Nantes subsidiary in 1993
- INFOLOGIC Brittany - Loire department has celebrated its 20th anniversary in 2013!
- Settlement in Nantes then Saint Herblain from 1993 to 2010
- Building new offices in ZAC La Fleuriaye in Carquefou in 2010

- A demonstration area dedicated to the presentation of the COPILOTE news
- 22 partners in service of the dynamic and local companies
- The greatest local references in the food supply chain equipped with COPILOTE, from SME to big groups : ALAIN FRANCOIS, ARMOR PLATS CUISINES, ARRIVÉ, FRANCAISE DE GASTRONOMIE, FROMAPAC, GUYADER, JEAN BRIENT, JEAN ROUHIAU, LDC, MAITRE JACQUES, MAREVAL, MIX BUFFET, REMI RAMON , SECOUÉ, SOBREVAL...

### 4 For INFOLOGIC, the innovative and universal technology choice is vital.

INFOLOGIC is destined to foresee the practices to come and proposes solutions at the cutting edge of the innovation. COPILOTE is entirely developed in Java language according to a three-tiers architecture. Promoted by ORACLE, GOOGLE and an Open Source large community, Java is more than ever a perennial language in permanent evolution.

This technology command gives multiple possibilities to the user:

- The use of tactile and graphic functions
- The use of devices as tablets and Smartphones
- The use of integrated tools
- The external data integration and merge of this data with the internal data
- The interface with production and shipping automatic machines and with computer-integrated material handling tools...

Our research & development team is today focused on the implementation of a Web customer in addition to the rich Java customer. This Web customer is used on the COPILOTE portals (customers, suppliers...) and also on the private network of the company.

# COPILOTE, an entirely INFOLOGIC solution

## 1 COPILOTE, an offer dedicated to the food supply chain

### A business solution :

COPILOTE answers to the demands of each food supply chain industry: beverages & spirits, cereals, pork products & salted meat, sweet & chocolate manufacturing, fruits & vegetables, animal nutrition, egg products, industrial bakery, cooked dishes, seafood, dairy products, dry products, mass catering, poultry products...

COPILOTE is a business vertical ERP helping you to take into account the constraints of your activity no matter what : RP, assembly BOM, cutting, raw material balancing, traceability, UB, DLS management...

### A solution dedicated to the activity profile :

COPILOTE manages all the food supply chain activities, and its derivatives:

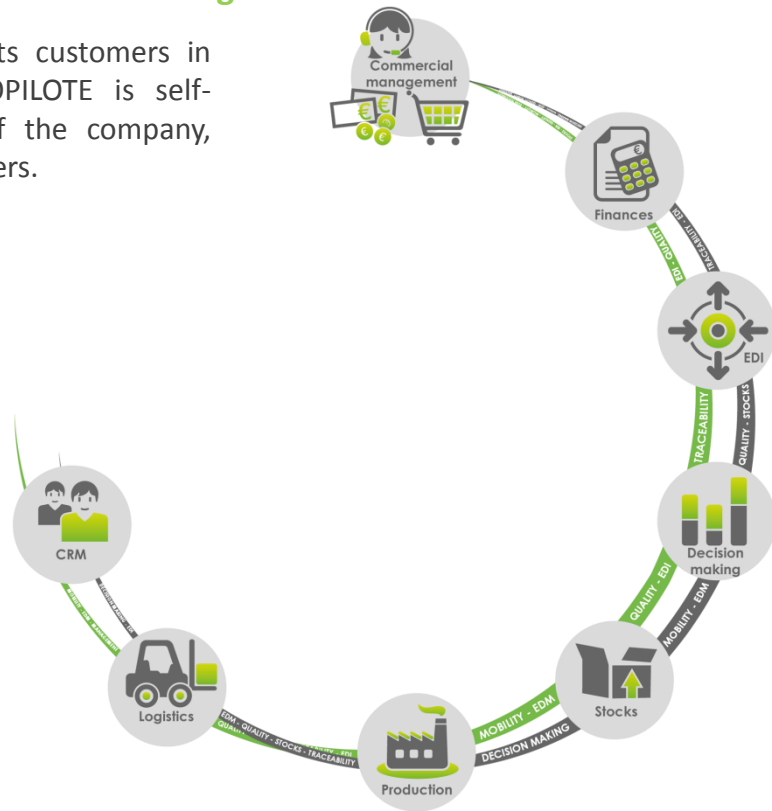

- Producers for the food supply chain by integrating the cultures and orchards management, the germination tracking...
- Industrialists of the food supply chain by integrating the manufacturing specific processes as the cutting, the assembly, the alcohol management...
- Traders of food products by integrating the UBD, FIFO, dynamic stocks notions...
- Logisticians by integrating the tools to pilot the transportation with dematerialization of the transportation documents on tablet, loading controls...
- Multi-activity cooperatives by integrating the approval, the contribution and compensation management...

### A solution that gives perspectives :

COPILOTE addresses to companies having multi-company, multi-sites and multi-nationalities issues.

## 2 COPILOTE, a complete functional coverage

INFOLOGIC, is the unique interlocutor of its customers in terms of Information System. In fact, COPILOTE is self-sufficient as it covers all the functions of the company, without having to call on other service providers.

COLLECTION	PARCEL MANAGEMENT	EDI	STOCKS	CAM	WORKSATION SUPERVISOR	SALES	EDI	STOCKS	LOGISTICS PLATFORM
FARMING	ACQUISITIONS	Suppliers	Raw material		M.E.S	CRM	Customers	Semi-finished and finished products	Washing Packaging
SLAUGHTERING	Admin receipt Workstation receipt					Mobilogic	Service providers	Dynamic locations	Grading Packing
	Nutrition Approval					Nutrition	Carriers		Order preparation
									Shippings WMS

STOCKS - DECISION MAKING - TRACEABILITY - QUALITY CONTROLS - EDM - EDI - FINANCES - MOBILITY

Légend : ■ Administrative modules ■ EDI modules ■ Factory modules ■ Cross-modules

For example, the EDI and Decision-making modules are often wrong integrated to a classic ERP from the market. But they create in COPILOTE native functions, entirely developed by INFOLOGIC.

**The EDI module** is the central tool of COPILOTE to exchange with the customers, the suppliers, the carriers and the storage service providers. It allows to transfer data between the modules and communicate with the exterior (interface with other bases...).

**The INFOCENTER module (decision-making)** is the request tool creating dashboards, statistics, forecasts, simulations in real time on the entire COPILOTE application. The INFOCENTER replaces Excel and other spreadsheets, and recovers directly all the data from other COPILOTE modules.

### **3** COPILOTE, a real return on investment

With COPILOTE, the financial investment of the customer is rationalized. The company processes are simplified, the station system is optimized, the information moves instantaneously. **The solution allows to save fast in productivity and to have a certain return on investment.**

Moreover, the COPILOTE innovative concept makes the solution perennial and lasting. The equipped company ensures its efficiency in the long term.

### **4** COPILOTE, a key solution in hand

**The expression of the customer's needs and the technical specifications are the anchor point of the project.**

A team of 35 Java engineers communicate daily with business consultants to anticipate the evolutions of our customers and to propose innovative features (tactile solutions for example) to adapt itself completely to their needs.

**The software deployment is organized by a project manager at the disposal of the customer...**

A team of 50 business consultants take into account the installation of COPILOTE, the requirements analysis at the Information System acceptance testing. The project manager, assisted by project team leaders, focus on installing the installation and assist the customer in the change process.

**...without neglecting taking into account the hardware installations.**

An efficient deployment requires taking into account a hardware architecture adapted to the company's functioning and to the good use of COPILOTE. Thus, the INFOLOGIC technicians instal servers, PCs, printers, trackers on the field...chosen carefully to optimize the use of COPILOTE and ensure a security and an optimal system operating mode due to the maintenance and prevention actions.

**The COPILOTE use is optimized by a quality training...**

Approved trainers, experts from the industrial world and experts of the COPILOTE solution train the users to well use the system.

**...and by offering a maintenance and assistance support.**

According to the customer constraints, the support is complete. Whether it is by e-mail, by telephone, by on-line assistance, it is assisted in its daily use of COPILOTE.
